

PATENT COOPERATION TREATY

From the INTERNATIONAL BUREAU

PCT

NOTIFICATION OF ELECTION

(PCT Rule 61.2)

To:

Commissioner
US Department of Commerce
United States Patent and Trademark
Office, PCT
2011 South Clark Place Room
CP2/5C24
Arlington, VA 22202
ETATS-UNIS D'AMERIQUE
in its capacity as elected Office

Date of mailing (day/month/year)

08 February 2001 (08.02.01)

International application No.

PCT/IB00/00408

Applicant's or agent's file reference

International filing date (day/month/year)

14 March 2000 (14.03.00)

Priority date (day/month/year)

15 March 1999 (15.03.99)

Applicant

POPOV, Sergey

1. The designated Office is hereby notified of its election made:

☒

in the demand filed with the International Preliminary Examining Authority on:

10 October 2000 (10.10.00)

☐

in a notice effecting later election filed with the International Bureau on:

2. The election ☒ was

☐

was not

made before the expiration of 19 months from the priority date or, where Rule 32 applies, within the time limit under Rule 32.2(b).

Date of mailing (day/month/year) 24 May 2000 (24.05.00)	IMPORTANT NOTIFICATION
Applicant's or agent's file reference	International application No. PCT/IB00/00408

The applicant is hereby notified that the International Bureau has received the record copy of the international application as detailed below.

Name(s) of the applicant(s) and State(s) for which they are applicants:

POPOV, Sergey (all designated States)

International filing date : 14 March 2000 (14.03.00)

Priority date(s) claimed : 15 March 1999 (15.03.99)

Date of receipt of the record copy
by the International Bureau : 02 May 2000 (02.05.00)

List of designated Offices :

AP : GH,GM,KE,LS,MW,SD,SL,SZ,TZ,UG,ZW

EA : AM,AZ,BY,KG,KZ,MD,RU,TJ,TM

EP : AT,BE,CH,CY,DE,DK,ES,FI,FR,GB,GR,IE,IT,LU,MC,NL,PT,SE

ATTENTION

The applicant should carefully check the data appearing in this Notification. In case of any discrepancy between these data and the indications in the international application, the applicant should immediately inform the International Bureau.

In addition, the applicant's attention is drawn to the information contained in the Annex, relating to:

- ☒ time limits for entry into the national phase
- ☒ confirmation of precautionary designations
- ☒ requirements regarding priority documents

A copy of this Notification is being sent to the receiving Office and to the International Searching Authority.

(54) Title: **SAFETY TROCAR ASSEMBLY**

(57) Abstract: A trocar assembly includes a low-profile retractable shield (14) deployed immediately adjacent to a cutting element (10) with a cross-sectional area which is small relative to the total cross-section of the assembly. In preferred examples, the total cross-sectional area protected by the shield element is less than about 0.4, and most preferably less than about 0.2, of the total cross-sectional area of the assembly. As a result, the shield extends itself as soon as the cutting element clears the tissue wall, prior to penetration of the remainder of the end portion of the assembly. Optionally, such a shield may be used in combination with a conventional, large-area shield to provide two-stage protection. Implementations of this principle, together with various locking mechanisms and additional features, are described in the context of various trocar configurations.

INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.

PCT/IB00/00408

I. Basis of the report

1. With regard to the elements of the international application:*

- ☐ the international application as originally filed.
- ☒ the description:
pages 1-38 _____ as originally filed
pages NONE _____, filed with the demand
pages NONE _____, filed with the letter of _____.
- ☒ the claims:
pages 39-49 and 51-54 _____, as originally filed
pages NONE _____, as amended (together with any statement) under Article 19
pages NONE _____, filed with the demand
pages 50,55 and 56 _____, filed with the letter of 15 MAY 2001 (15.05.2001)
- ☒ the drawings:
pages 1-25 _____, as originally filed
pages NONE _____, filed with the demand
pages 26, 27 _____, filed with the letter of 15 May 2001 (15.05.2001)
- ☒ the sequence listing part of the description:
pages NONE _____, as originally filed
pages NONE _____, filed with the demand
pages NONE _____, filed with the letter of _____.

2. With regard to the language, all the elements marked above were available or furnished to this Authority in the language in which the international application was filed, unless otherwise indicated under this item.

These elements were available or furnished to this Authority in the following language English which is:

- ☐ the language of a translation furnished for the purposes of international search (under Rule 23.1(b)).
- ☐ the language of publication of the international application (under Rule 48.3(b)).
- ☐ the language of the translation furnished for the purposes of international preliminary examination (under Rules 55.2 and/or 55.3).

3. With regard to any nucleotide and/or amino acid sequence disclosed in the international application, the international preliminary examination was carried out on the basis of the sequence listing:

- ☐ contained in the international application in printed form.
- ☐ filed together with the international application in computer readable form.
- ☐ furnished subsequently to this Authority in written form.
- ☐ furnished subsequently to this Authority in computer readable form.
- ☐ The statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as filed has been furnished.
- ☐ The statement that the information recorded in computer readable form is identical to the written sequence listing has been furnished.

4. ☒ The amendments have resulted in the cancellation of:

- ☒ the description, pages None
- ☒ the claims, Nos. None
- ☒ the drawings, sheets/fig None

5. ☐ This report has been established as if (some of) the amendments had not been made, since they have been considered to go beyond the disclosure as filed, as indicated in the Supplemental Box (Rule 70.2(c)).**

* Replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report since they do not contain amendments (Rules 70.16 and 70.17).

** Any replacement sheet containing such amendments must be referred to under item 1 and annexed to this report.

WRITTEN OPINION

International application No.
PCT/IB00/00408

V. Reasoned statement under Rule 66.2(a)(ii) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. STATEMENT

Novelty (N)	Claims <u>3-8, 10-55, 57-62, 64-92, 94 and 95</u>	YES
	Claims <u>1, 2, 9, 56, 63, 93</u>	NO
Inventive Step (IS)	Claims <u>39-55, 95</u>	YES
	Claims <u>1-38, 56-94</u>	NO
Industrial Applicability (IA)	Claims <u>1-95</u>	YES
	Claims <u>NONE</u>	NO

2. CITATIONS AND EXPLANATIONS

Claims 1, 2, and 9 lack novelty under PCT Article 33(2) as being anticipated by HUNSBERGER et al. Hunsberger et al. disclose all the claimed elements including penetrating apex, protector means, and biasing means. In letter of 15 May 2001 Applicant argues that individual projections are not disclosed by Hunsberger; however such a limitation is not recited in the claims.

Claims 56, 63, and 93 lack novelty under PCT Article 33(2) as being anticipated by STEPHENS. Stephens discloses, inter alia, a knife having a blunt apex and cutting means proximally situated to the blunt apex, as seen best in Fig. 4. Additionally Stephens discloses the proximal end of the knife is located proximally of the distal point of sleeve 34 sloping edge. In letter of 15 May 2001 Applicant points out demerits of the prior art; however the prior art discloses the recited limitations of the claimed invention.

Claims 57-62, 64-67, 78-92, and 94 lack an inventive step under PCT Article 33(3) as being obvious over STEPHENS. The particulars recited in the dependent claims merely contain limitations that would be obvious to one of ordinary skill in the art to incorporate with the features disclosed by Stevens. In letter of 15 May 2001 Applicant points out limitations concerning the protector thickness width, and perimeter as well as limitations to the knife cutting line of his invention. Such changes in size relationships between the various elements would be obvious to the skilled artisan to achieve a desired objective.

Claims 3-8, and 10-38 lack an inventive step under PCT Article 33(3) as being obvious over HUNSBERGER et al. The claims contain limitations that would be obvious to one of ordinary skill in the art to incorporate with the invention of Hunsberger.

Claims 68-74 lack an inventive step under PCT Article 33(3) as being obvious over MOREJON. Morejon discloses an inflatable internal cuff and exterior flanged restraining means. It would be obvious to one of ordinary skill in the art to incorporate the particulars claimed in the dependent claims with the invention disclosed by Morejon. The use of elastic expandable material for cuffs is well known in the art.

Claims 75-77 lack an inventive step under PCT Article 33(3) as being obvious over HUNSBERGER et al. in view of MOREJON. Hunsberger discloses a locking mechanism for a trocar shield but does not disclose an inner sealing means. Morejon discloses the sealing means and together the references teach the limitations of the claimed invention. The interrelatedness of the locking mechanism, obturator, and sleeve is seen as the locking mechanism prevents sleeve movement when in the locking position.

Claims 39-55 and 95 meet the criteria set out in PCT Article 33(2)-(4), because the prior art does not teach or fairly suggest independently movable protector members as claimed.

----- NEW CITATIONS -----

US 5,713,869 A (MOREJON) 03 FEBRUARY 1998, See Figs 1-3 and related text.

INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.

PCT/IB00/00408

VIII. Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the questions whether the claims are fully supported by the description, are made:

Claim 1 is objected to under PCT Rule 66.2(a)(v) as lacking clarity under PCT Article 6 because claim 1 is indefinite for the following reason(s): there is no antecedent basis for "said shield segments" in claim 1.

IPEAUS 15 MAY 2001

constituted by the plane intersecting said cutting edge and said longitudinal central axis;

65. Device according to Claim 64, wherein said cutting plane is the symmetry plane of said sloping edge.

66. Device according to Claim 63, wherein there are more than one said cutting edge having differing said cutting planes.

67. Device according to Claim 66, wherein the number of said sloping edges corresponds to the number of said cutting planes

68. Trocar assembly comprising:

- portal with elongated tubular cannula and portal unit mounting means for mounting said portal unit in orifice of body cavity wall which has inner mounting means made as inflated cuff mounted on said tubular cannula, and there is connector means for said cuff connection to the external gas supply, said cuff being formed of an elastic expandable material.

69. Device according to Claim 68, wherein there is an outer mounting means comprising restraining member movable along said tubular cannula, and resistance means precluding spontaneous proximal displacement of said restraining member.

70. Device according to Claim 69, wherein said restraining member has a flange and an orifice said tubular cannula passes through, and said resisting means is made as engagement means and has restraining member engagement protrusions situated on inner of said orifice, and tubular cannula engagement protrusions situated on outer surface of said tubular cannula.

71. Device according to Claim 68, wherein said connection means comprises connector with rebound valve and a passage connecting said connector and said cuff and passing through the wall of said tubular cannula.

PEA/US 15 MAY 2001

- penetrating means situated on said penetrating end;

- a protector means for said penetrating means having at least one shield situated on said obturator and adapted to actuate between a retracted and an extended position when said shield protects said penetrating means;

5 - shield open part, this being the part of said shield which when said protector means is in said retracted position, is situated distally of the plane perpendicular to said longitudinal central axis and intersecting the proximal point of the section of outer surface of said shield protruding beyond the bounds of the members of said trocar assembly immovable with regard to said penetrating means and located distally of said cannula open distal end;

10 - common projection of outer surfaces of the members of said trocar assembly situated distally of said cannula open distal end onto the plane perpendicular to said longitudinal central axis, having the center in the intersect point of said plane and said longitudinal central axis;

- projection width of said shield and as such serves the distance between said common projection center and its most remote point on said shield projection outline;

15 - relative projection width of said shield outer outline which is the ratio of said projection area of shield outer outline to the area of the circle with radius equal to said projection width of said shield so that said relative projection area of said shield outer outline is always less than 0.4.

20 92. Device according to Claim 91, wherein said relative projection area of shield outer outline is less than 0.2.

93. A safety trocar assembly comprising:

25 - trocar unit with penetrating means having at least two penetrating zones distal and proximal - each of which has independent of each other responsive means which provide penetration of body tissue at the level of said proximal penetration zone occurs under higher tissue tension than penetration of tissue at the level of said distal penetration zone.

94. Device according to Claim 93, wherein said responsive means is presented in the form of said penetrating means which at the level of said distal and proximal zones are made as cutting

55,

HOEAMEN CLEFT.

PEANUS 15 MAY 2001

members so that said distal cutting member is made sharper than said proximal cutting member.

95. Device according to Claim 93, wherein said responsive means are made in the form of protector member for each of said penetrating zones so that the displacement of said proximal protector member from the extended to the retracted position demands greater effort than the displacement of said distal protector member.
